Blackmagic Design has announced the Blackmagic eGPU, a new external GPU designed for professional video editing and 3D rendering. The eGPU is compatible with DaVinci Resolve and other professional software, offering a significant performance boost for users who need more power than their laptop can provide. It features 3D and VR capabilities, making it a versatile solution for creative professionals.

The Blackmagic eGPU is powered by a Radeon Pro 580 GPU, which provides 38.4 teraflops of performance. It includes 8GB of GDDR5 memory and 36 stream processors. The device is designed to be quiet, with a maximum noise level of 18dB. It is compatible with Metal Graphics and offers 5.5 teraflops of performance. The eGPU is a powerful addition to any workstation, providing a significant performance boost for users who need more power than their laptop can provide.

The Blackmagic eGPU is compatible with DaVinci Resolve 15 and ResolveFX. It is designed to be quiet, with a maximum noise level of 18dB. It is compatible with Metal Graphics and offers 5.5 teraflops of performance. The eGPU is a powerful addition to any workstation, providing a significant performance boost for users who need more power than their laptop can provide.
